Self-Critique

- What did we do well?
  - Kept up constant and clear communication, very organized
  - Very willing to help each other, and step up when needed
- What did we learn?
  - New programming languages including javascript and sql
  - Full-stack development, working in teams
- What did we teach each other
  - How to fairly delegate work
  - Communicate clearly what is needed from other members

Self Critique

- What can we do better
  - Stay more up-to-date on the issues board and user stories
  - More efficient ways of dividing the work
- What effect did the peer reviews have
  - Keep us accountable, and honest with ourselves
  - Encourages everyone to contribute
- What puzzles us
  - AWS
  - Managing free API credits

Capitol Capital Critique

- What did we learn from their website?
  - How invested most politicians are
- What can they do better?
  - Better formatting on the model pages, center the text
  - Almost every picture is partially cut off in the card view, could have fixed that
- What puzzles us about their website?
  - Visualizations are poorly labeled on the axis

Capitol Capital Critique

- What did they do well?
  - Great visuals, like reactive buttons
  - Clean layout, high detail pages
- How effective was their RESTful API?
  - Their API is very rich in features, enabling specific searches, but it is lacking simple english descriptions for each call, so it is harder to find the one you need at first.
- How well did they implement your user stories?
  - They were able to implement most of our requests, but (understandably) did not include any that would have required more significant development time
